Profile

Frontend and full-stack developer with 5+ years shipping web and mobile products, most recently a live care-management platform for remote patient monitoring (RPM) and chronic care management (CCM). I move live apps to new frameworks with parity tests, ship iOS and Android releases, and run AI coding agents inside rules and merge gates I wrote.

Experience

Vianova · Software Developer, Frontend & Mobile → Full Stack (2026)

2021 - present

Web and mobile development company: its own care-management platform, plus client apps for media, education and retail.

Care-management platform (RPM, CCM)

- **Migrating the frontend from Vue (Nuxt 2) to React, route by route.** Wrote most of the rules and merge gates the team and its AI agents work inside; a route moves only when parity tests pass on both apps. One screen went from first note to merged in a working day.
- **Built patient-care features since 2023:** profiles, care plans, device vitals, labs, CPT billing claims and in-app video and phone calls (Twilio, Chime), in 4 languages.
- **Took on the Laravel API in 2026:** enrollment drafts, a lab catalog and multi-tenant security fixes (per-tenant data, roles, patient timezones). Cut one billing report from 16 database queries to 2, so it no longer times out.
- **Researched five design systems and wrote the guides AI agents follow** for Design System v2 (team project): 36 accessible components, 805 tokens, 20 releases in about six weeks, 96.6% less JavaScript for a Button-only page.

Client projects, web and mobile

- **Rebuilt a video-learning platform on Nuxt 3 from an empty template** (core frontend team, 2023 - 2026): 34 routes, 270+ components, live streams with chat (AWS IVS), Stripe, Apple and Google subscriptions, English/Arabic RTL.
- **Shipped a children's reading app for iOS and Android** (2022 - 2025): about 14 releases to both stores, three major React Native upgrades (0.63 → 0.81), PDF/EPUB reader, ISBN scanning, 3 languages.
- **Built Stripe payment screens for a donations app and a bookstore app** with push deep links and checkout (2021 - 2022).

Incentiv · Frontend Developer

2024

- **Built the frontend of a Web3 smart-wallet portal** on Next.js 14: passkey and wallet sign-in, onboarding, dashboard and a QR balance pop-up, in English and French.

AvahiTech · Frontend Developer, freelance

Freelance

- **Built a business dashboard with AI features** in React: AI headshots from uploaded photos and a chat assistant for uploaded PDFs; backend endpoints in Python (FastAPI).

Selected projects

- **Futurisma** (github.com/gentritr1/futurisma): a browser racer with 9 circuits (Three.js, Blender), built with a multi-agent pipeline (Claude plans and codes, Codex models in 3D, Higgsfield makes art and sound), every phase checked by re-running its tests. One level shipped in a week.
- **Offday**, built with one other developer: multi-tenant time-off app (Next.js 16) with about 200 Playwright tests, incl. tenant isolation.
- **Live web games:** FJALË (fjalë.com), a daily Albanian word game that works offline; Za! (za-game.vercel.app), a multiplayer card game with a server that decides every move.

Skills

Frontend	React 19, Next.js, Vue / Nuxt, TypeScript, TanStack, Zustand, Zod, Tailwind
Mobile	React Native for iOS and Android, store releases
Backend	Laravel / PHP 8.3, Python / FastAPI, MySQL, Redis
Quality	Playwright, Vitest, Pest, axe, CI merge gates
AI	Claude Code and Codex daily; agent rules, skills and gates
Services	Stripe, Firebase, AWS IVS, Twilio, Pusher

Open source

- Forks of **epubjs-react-native** and **react-native-pdf**, maintained for a production reading app.

Education

Bachelor's degree, UBT
