Profile

Frontend and full-stack developer with 5+ years shipping web and mobile products, most recently a live care-management platform for remote patient monitoring (RPM) and chronic care management (CCM). I move live apps to new frameworks with parity tests, ship iOS and Android releases, and run AI coding agents inside rules and merge gates I wrote.

Experience

Vianova · Software Developer, Frontend & Mobile → Full Stack (2026)

2021 - present

Web and mobile company: its own SOC 2-audited care-management platform, plus client apps for media, education and retail.

Care-management platform (RPM, CCM)

- **Driving the frontend migration from Vue to React, route by route.** I wrote most of the migration rules and merge gates that developers and AI agents work within, so no route ships until parity tests pass.
- **Built patient-care features since 2023:** care plans, device vitals, labs, CPT billing claims, EHR data checks (FHIR), and in-app video and phone calls, in 4 languages.
- **Took on the Laravel API in 2026:** fixed multi-tenant security (data isolation, roles, timezones) and cut a timing-out billing report from 16 queries to 2.
- **Led the research and wrote the AI-agent guides behind Design System v2,** which shipped 36 accessible components in about six weeks.

Client projects

- **Rebuilt the frontend of a video-learning platform on Nuxt 3 from scratch:** live streaming with chat, web and in-app subscriptions, English/Arabic RTL (2023 - 2026).
- **Shipped a children's reading app for iOS and Android:** about 14 store releases, three major React Native upgrades and a custom PDF/EPUB reader (2022 - 2025).
- **Built payment and checkout flows** for donation and bookstore apps (2021 - 2022).

Incentiv · Frontend Developer

2024, freelance

- **Built the frontend of a Web3 smart-wallet portal** in Next.js: passkey sign-in, onboarding and the dashboard.

AvahiTech · Frontend Developer

Freelance

- **Built an AI business dashboard in React** (AI headshots, chat with uploaded PDFs), plus API endpoints in FastAPI.

Selected projects

- **Futurisma** (github.com/gentritr1/futurisma): 3D browser racing game (Three.js), built with a multi-agent AI pipeline I designed, verified by tests at every phase.
- **Offday:** co-built a multi-tenant time-off app (Next.js) with about 200 Playwright tests, including tenant isolation.
- **FJALË** (fjalë.com) **and Za!** (za-game.vercel.app): live web games. A daily Albanian word game that works offline, and a multiplayer card game with a server that decides every move.

Skills

Frontend	React 19, Next.js, Vue / Nuxt, TypeScript, TanStack, Zustand, Zod, Tailwind
Mobile	React Native for iOS and Android, store releases
Backend	Laravel / PHP 8.3, Python / FastAPI, MySQL, Redis
Quality	Playwright, Vitest, Pest, axe, CI merge gates
AI	Claude Code and Codex daily; agent rules, skills and gates
Services	Stripe, Firebase, AWS IVS, Twilio, Pusher

Open source

- **epubjs-react-native:** added a native WebView prop so custom fonts render on Android. **react-native-pdf:** fork maintained for the same production reading app.

Education

Bachelor's degree, UBT, 2021

Languages

Albanian, English
