Profile

Frontend and full-stack developer with 5+ years in web and mobile. Since 2023 I have worked on a live care-management platform for remote patient monitoring (RPM) and chronic care management (CCM), where I now drive the frontend move from Vue to React. I ship iOS and Android releases, mentor juniors and work daily with AI coding agents under rules I wrote.

Experience

Vianova · Frontend & Mobile, Full Stack since 2026

May 2021 – Present

Web and mobile company: its own SOC 2-audited care-management platform, plus client apps for media, education and retail.

- **Mentored and onboarded developers, mostly juniors.**

Care-management platform (RPM, CCM)

- **Driving the frontend migration from Vue to React, route by route.** Wrote most of the migration rules and merge gates that developers and AI agents work within, so no route ships until parity tests pass.
- **Building patient-care features since 2023:** care plans, device vitals, labs, CPT billing claims, EHR data checks (FHIR), and in-app video and phone calls, in 4 languages.
- **Took on the Laravel API in 2026:** fixed tenant data isolation, role checks and timezone bugs, and cut a timing-out billing report from 16 queries to 2.
- **Led the research and wrote the AI-agent guides behind Design System v2,** which shipped 41 accessible components in about six weeks.

Client projects

- **Rebuilt the frontend of a video-learning platform on Nuxt 3 from scratch:** live streaming with chat, web and in-app subscriptions, English/Arabic RTL (2023 – 2026).
- **Built a leadership-coaching app for iOS and Android** from an empty template: tasks, podcasts, video (2022 – 2024).
- **Shipped a children's reading app for iOS and Android:** about 14 store releases, three major React Native upgrades and a custom PDF/EPUB reader (2022 – 2025).
- **Wrote the payment and checkout flows** for donation and bookstore apps (2021 – 2022).

Freelance frontend contracts (alongside Vianova)

- **Incentiv, 2024:** Next.js frontend of a Web3 smart-wallet portal, with passkey sign-in, onboarding and the dashboard.
- **AvahiTech, 2024:** AI business dashboard in React and Next.js on AWS, with AI headshots and chat with uploaded PDFs.

Selected projects

- **Futurisma** (github.com/gentritr1/futurisma): 3D racing game for the browser in Three.js, built with my own multi-agent AI pipeline that runs tests after each phase.
- **Offday:** co-built a multi-tenant time-off app (Next.js) with about 200 Playwright tests, including tenant isolation.
- **FJALË** (fjalë.com) **and Za!** (za-game.vercel.app): two live web games, a daily Albanian word game that works offline and a multiplayer card game where the server checks every move.

Skills

Frontend	React 19, Next.js, Vue / Nuxt, TypeScript, TanStack, Zustand, Zod, Tailwind
Mobile	React Native (iOS, Android), store releases
Backend	Node.js, Laravel / PHP 8.3, MySQL, PostgreSQL, MongoDB, Redis
Quality	Playwright, Vitest, Pest, axe, CI gates
AI	Claude Code, Codex, agent rules, skills
Services	Stripe, Firebase, AWS IVS, Twilio, Pusher

Open source

- **epubjs-react-native:** added a native WebView prop so custom fonts render on Android. Also maintain a fork of **react-native-pdf** for the children's reading app.

Education

Bachelor's degree, UBT, 2021

Languages

Albanian (native), English
